

Figure2: Effectiveness, potential deficiencies and counter measures of convalescent plasma therapy for COVID-19 patients.

<b>Convalescent plasma therapy</b>		
<b>Effectiveness</b>	<b>Potential Deficiencies</b>	<b>Counter Measures</b>
<b>Improving the clinical symptoms</b>	<b>Antibody-dependent enhancement</b>	<b>Transfusion timing, dosage, frequency</b>
<b>Increasing the neutralizing antibody</b>	<b>Antibody mediated Proinflammatory disease</b>	<b>Standard procedure for collection, preservation, transport, to transfusion.</b>
<b>Decreasing the viral load</b>	<b>Severe tissue damage</b>	
<b>Reducing the death rate</b>	<b>Potentializing viral replication</b>	
<b>Normalize temperature</b>	<b>Shorter-term protection</b>	
<b>Decrease SOFA</b>
