

Table1: Blood gas values of the patient according to days

| Blood gases      | Before intubation   | After intubation   | Ecmo3th hours   | Ecmo 12th hours |
|------------------|---------------------|--------------------|-----------------|-----------------|
| Po2(mmHg)        | 32.9                | 34.8               | 54              | 61.1            |
| Pco2(mmHg)       | 38.5                | 32.7               | 29.1            | 36              |
| Ph               | 7.32                | 7.42               | 7.49            | 7.43            |
| Saturation %     | 57                  | 63.4               | 90.6            | 91.5            |
| Lactate (mmol/l) | 2.3                 | 1.6                | 1.2             | 1               |
|                  | 13th day ecmo login | 13th day ecmo exit | 13th day artery | Ecmo weaning    |
| Po2(mmHg)        | 21.3                | 27.5               | 33.7            | 38.4            |
| Pco2(mmHg)       | 30.1                | 25.9               | 30.1            | 41.8            |
| Ph               | 7.57                | 7.61               | 7.57            | 7.44            |
| Saturation %     | 40.9                | 61.1               | 73              | 70.3            |
| Lactate (mmol/l) | 1.9                 | 2                  | 2.2             | 2               |
