

**Table 1.** Diagnoses among 117 children referred to the University of Iowa Pediatric Allergy and Pulmonary Division because of exercise-induced dyspnea between 1996 and 2003. Treadmill exercise sufficient to reproduce symptom were performed with continuous cardiopulmonary monitoring.<sup>3</sup>

<b>Disorder identified</b>	<b>Number of patients</b>
Exercise-induced bronchospasm	11
Vocal cord dysfunction	13
Restrictive physiology	15
Exercise-induced laryngomalacia	2
Exercise-induced hyperventilation	1
Exercise-induced supraventricular tachycardia	1
Normal physiologic limitation	74
